How to Home Compost

A practical guide for Avolutions Earth Edition cellulose products labeled home compostable

Start with the label. Only place an Earth Edition item in a home compost system when its package or SKU documentation specifically permits it.

1

Choose a compost system

Use a home bin or pile with airflow and drainage. Place it on bare soil when practical.

Build a brown base

Start with twigs, dry leaves, or shredded uncoated cardboard to create structure and airflow.

2

3

Add balanced layers

Alternate moist green materials with dry brown materials. Aim for about two to three parts brown to one part green by volume.

Keep it damp

Moisten until the pile feels like a wrung-out sponge. Add water only when the materials become dry.

4

5

Turn for oxygen

Mix or turn every one to two weeks so air reaches the center and materials break down evenly.

A Healthy Pile Needs

AIR

Turn regularly

MOISTURE

Damp, not soaked

BALANCE

Greens plus browns

TIME

Check weekly

Continue to the final steps and material guide

Finish the Composting Cycle

Monitor the pile, harvest finished compost, and build the right mix of greens and browns

6

Monitor and adjust

Check weekly. If the pile smells, add browns and turn. If it is dry or inactive, add a little water and fresh greens.

Harvest finished compost

It is ready when it is dark, crumbly, earthy-smelling, and most original materials are no longer recognizable.

7

Build the Right Mix

Greens supply nitrogen. Browns supply carbon and structure.

GREEN MATERIALS	BROWN MATERIALS
• Fruit and vegetable scraps • Grass clippings • Coffee grounds and paper filters • Tea leaves without plastic bags • Fresh plant trimmings	• Dry leaves and small twigs • Shredded uncoated paper or cardboard • Straw • Untreated sawdust or wood chips in small amounts • Qualifying Earth Edition cellulose products, cut into smaller pieces

Before You Add an Earth Edition Product

- Confirm that the package or SKU documentation says the item is suitable for home composting.
- Remove wrappers, labels, or attached components that are not compostable.
- Cut or break the item into smaller pieces and distribute it through the brown layer.

Keep These Out

Meat, fish, bones, fats, oils, dairy, pet waste, diseased plants, glossy or coated paper, produce stickers, conventional plastic, and any item not clearly labeled compostable.

Composting results vary with temperature, moisture, airflow, pile size, and local conditions. Follow product labeling and local composting guidance
